Memo to File:

RE: Western Strategic Minerals

Pamela Grubaugh-Littig attended a predesign conference on March 7, 1984 regarding Williams Strategic Minerals. This company will smelt the flue dust that is produced by the Kennecott Smelter. This material will be picked up in containers that have already been loaded by Kennecott personnel. This process will recover copper, arsenic, and lead at a smelter (designed by Humboldt-Wedog) at a location by Lakepoint (about three miles west of the Kennecott smelter) that will have a capacity to process 60 to 70 tons per day of raw flue dust.

In the meeting, I could see no need for Williams Strategic Minerals to complete an MR-1 form or a notice of intent to mine. However, the Kennecott MRP could be modified to reflect this.

Pam Grubaugh-Littig
Reclamation Engineer *pjl*
